

DNA TYPING

High risk types detected:

High risk types genotyped:

HPV 16 and 18

mRNA E6/E7

APTIMA HPV Assay®

High risk types detected:

HPV 16, 18, 31, 33, 35, 39, 45,
51, 52, 56, 58, 59, 66 and 68

High risk types genotyped:

HPV 16, 18 and 45

We are proud to announce that we will be offering both high risk DNA typing and mRNA E6/E7 testing with immediate effect. This will allow our clinical colleagues the opportunity to request the test of their preference, depending on the clinical setting and management of their patients. Please indicate which test you require when requesting HPV testing. We can also register your preferred test as the default, for all future HPV typing. Please contact the local laboratory or client service officer.

MENSLIKE PAPILLOOMVIRUS

HOË RISIKO TIPES

Ons is trots om aan te kondig dat ons met onmiddellike ingang beide hoë risiko DNA tipering en mRNA E6/E7 sal aanbied. Ons kliniese kollegas sal dus die geleentheid hê om die toets van hulle voorkeur aan te vra, gegewe die kliniese situasie en hantering van hulle pasiënte. Wees asseblief so gaaf en dui aan watter toets u verlang met die aanvraag van MPV toetse. Ons kan ook 'n spesifieke toets as u verstek opsie vir toekomstige MPV tipering registreer. Kontak asseblief u plaaslike laboratorium of kliëntediensbeampte.
