

"Pathology that Adds Value"

19 December 2019

Dear Colleagues

Re: Platform change for urine cortisol analysis

Please take note of a platform change for 24 hour urine cortisol analysis.

This test will now be performed on the **Abbott Architect immunoassay platform** and will result in a change in reference interval to:

24 hr urine cortisol reference interval: 11.8 – 485.6 nmol/24 hours

Pre-analytical requirements and test requesting will remain unchanged.

For any further enquiries, questions or comments please feel free to contact the chemical pathologist on call.

Regards
